Team Member #2	
Team Member #3	
Team Member #4	

### Part 1

Look at the copy of the map you have been given. As a city planning team, choose a location for your new city. Mark this location on the map and label it with your city's name.

Why have you chosen this location for your city?

What advantages are there for choosing this location?

Are there any disadvantages to living in this location?

Why is your city important to the rest of the country? What resources might it have access to that it can trade with other cities?

Describe the location you have chosen for your city.  
What physical features are near you?

What is the climate of your city like? Look at the climate map provided by your teacher to find the climate number for your city. Check the climate descriptions to find the temperature and precipitation patterns for your city.

Number and name of your climate: \_\_\_\_\_

What is precipitation like in your city? \_\_\_\_\_

\_\_\_\_\_

What are yearly temperatures like in your city? \_\_\_\_\_

## City Charter (Part 2)

As city planners, one thing you need to consider is how you will keep your city safe from natural disasters. Take another look at the world map. What are some natural hazards that may threaten your city? List at least three but if you can identify more write them down as well.

Hazard	Who will research this?

Each member of your team will become an expert on one or more of these hazards. You will be responsible for learning about this risk, how you can predict when these events will occur, how much damage they could cause, and what your city could do to protect itself from these disasters. Record everyone's choice next to their names on the front of this sheet. Every hazard that your group came up with should be covered by at least one person.
