## DNA Keychains

Watch the tutorial and use 6/0 sized beads to make your DNA Key chain. Complete the table below.

Key:

| Molecule | Amount of Beads | Color Name | Color Sample |
| :--- | :---: | :---: | :---: |
| Phosphate | 26 |  |  |
| Sugar (deoxyribose) | 26 |  |  |
| Adenine (A) | 6 |  |  |
| Thymine (T) | 6 |  |  |
| Guanine (G) | 6 |  |  |
| Cytosine (C) | 6 |  |  |

Color in the model below using the color samples you chose to match your DNA keychain. Draw 1 base connecting to each sugar ( $\mathrm{A}, \mathrm{T}, \mathrm{G}, \mathrm{C}$ ). Remember that A and G and purines and T and C are pyrimidines.
