Energy and Reactions Notes

| Energy | | | | |
|-----------------|---|----------------------------------|----------------|---------------------------|
| | For | to react, | have to be | broken. |
| | This takes (activation energy) | | | |
| | Many forms of | can be | used to | bonds. |
| Forms of energy | Energy can be | | as | |
| | energy-a form of energy associated with the | | | |
| | of atoms and molecules in any material | | | |
| | Ex | warmers | | |
| | Energy- Energy in the form of | | | |
| | Ex | Stick | :S | |
| | | <u>Energy-</u> a form of matter. | of | _ that is associated with |
| | | | | |
| | a form of energy resulting from the | | | |
| | ofparticles | | | |
| | Ex | | _ | |
| Chemical Energy | | | | |
| | | | | ompound |
| | to produce | comp | ounds. | |
| Exothermic | More energy is | | when the | forms |
| | than it takes to brea | k the | in the | reactants. |
| | | | | |
| | It gets | | | |
| Endothermic | | | | |
| 2. Tao Chemino | More energy is | | _ to break the | in the |
| | | | by forming bor | |
| | Energy is | | | |
| | It Gets | | | |
