

As part of the review for the unit test, choose **one** of the nine main ideas for the unit you feel you understand the best, or feel you have mastered. Then write a few details about it in the box. When instructed by the teacher, you will then search for students in the classroom who are “masters” of the other 8 boxes. While the other student is explaining what they know, you need to write notes in the box they are explaining. After they teach you what they know, they will sign their name in that box. You need to find 8 different students to get 8 different signatures (1 will be yours for a total of 9).
