

NOTEBOOK PAGE 9

Reflection Directions

Directions - Create a graph to display the data you collected during the experiment.

Step 1 - create a large “L” bracket. It should take up most of the page

Step 2 - on the bottom write the colors of M&M's tested

Step 3 - Write a number scale for what was tested on the side of the L bracket of what you measured (example, if you tested the weight of each color, look at the data and find the highest weight, then write a scale up to that number)

Step 4 - use lines (bars) to display the result for each color.
