

# SEDIMENTARY STORIES

each cm represents  
50,000 years

## Limestone

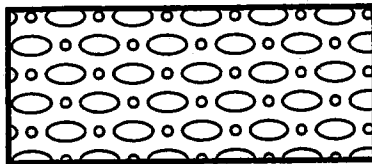

This type of sedimentary rock forms farthest away from land on the deep ocean bottom. Fossilized shells are often found in limestone.

each cm represents  
100,000 years

## Coal

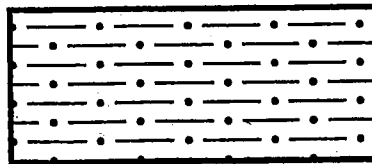

This type of sedimentary rock is sometimes called organic sedimentary rock. Coal forms in moist wetlands such as marshes and swamps.

each cm represents  
10,000 years

## Conglomerate

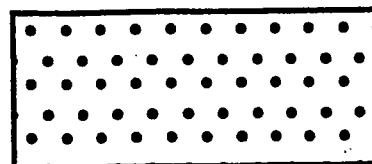

This type of sedimentary rock forms at the mouth of a river as it flows into the ocean.

each cm represents  
25,000 years

## Siltstone

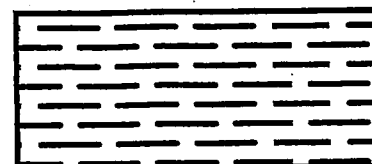

This type of sedimentary rock is formed away from the beach, but not in the deep part of the ocean.

each cm represents  
20,000 years

## Sandstone

This type of sedimentary rock forms near a beach where sediments are deposited by the action of waves.

each cm represents  
40,000 years

## Shale

This type of sedimentary rock forms in deep quiet ocean water. Fossils are often found in shale.
