

Name: _____

symbiotic relationships with imaginary creatures

Draw and color a picture of an imaginary creature and provide a detailed description.

Habitat: Land of Pizza Hut

Eats: Wild Buffalo wings

Size: 12' 9"

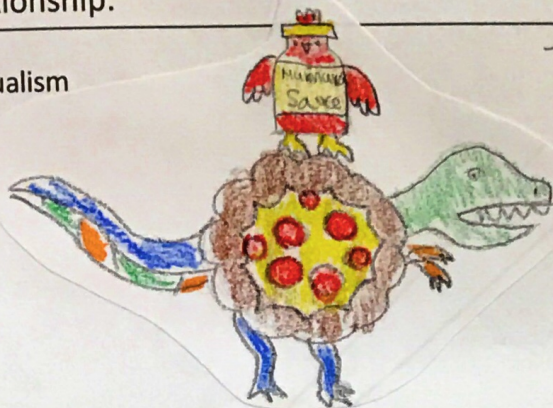

Coloring: green head, blue tail & legs, body of a pizza

Active Time: (day or night) Active at night

Etc.

Draw and color a picture of each of the following relationships that your imaginary creature will have with another imaginary creature and provide a detailed description of each relationship.

Mutualism

The marinara bird eats the burnt pepperoni off the pizza raptor to keep it's flesh clean. The marinara bird gets food & the raptor stays clean.

Commensalism

The wild buffalo wing eats the parmesan cheese crumbs that fall off the pizza raptor & breadamander.

Parasitism

The wild buffalo wing eats all of the cheese off the pizza. The cheese is the protective "coat" that keeps the pizza raptor warm.

Predator/Prey

the rancha sour kills the pizza raptor by getting it too soggy.
