

Where on Earth are the Resources?

Directions: Read the article about Distribution of Earth's Resources. From the reading draw a **COLORED** picture of the formation of the resource. And color the map to show the areas where that resource is found. Use the colored map of the world to help you find the locations of the countries and continents on the map.

1. Fertile Soil

Draw a picture of an environment with fertile soil.

Color in the areas of the map with fertile soil in **brown**.

2. Biodiversity

Draw a picture of an environment with biodiversity.

Color in the areas of the map with biodiversity in **green**.

3. Uranium

Draw a picture to describe uranium

Color the areas of the map with uranium in **blue**.

4. Fossil Fuels

Draw a picture of how coal is formed.

Color in the areas of the map with coal reserves in **orange**.

Draw a picture of how oil & natural gas are formed.

Color in the areas of the map with oil & natural gas reserves in **purple**.

5. Metals & Minerals

Draw a picture of the geologic event where metals and minerals are found.

Color the areas of the map with gold in **yellow**. Color the areas of the map with diamonds in **gray**.

Questions:

1. Do you see any patterns in where the resources are distributed? Describe the patterns that you see.
2. Which country/countries have the most resources?
